Pre-Defined RBAC Roles

- You don't need to create your own complex roles, you can also use one of the predefined ones:

Role name	Description
cluster-admin	super-user access. Can be used with ClusterRoleBinding (superuser access on the cluster) or with RoleBinding to limit access within a namespace
admin	admin access, intended to be used only with RoleBinding. Has read/write access within the namespace, but can't change quotas
edit	read/write access to most objects within a namespace, but can't view/create new roles or rolebindings
view	read access, but can't see any secrets, roles, or rolebindings
